# 2014.10.15 - Website Bug Notes

The following screen shots are some of the bugs I have noticed during testing today.

## Please remove the LLC from the website name.

The previous problem with the Athlete registration not going through has been corrected. I received an email confirming the registration, which is what is supposed to happen. However, just one minor thing: please remove the ", LLC." from the text in the following screen shot.

Admin Panel Access

Please also provide access to the Admin Panel for me. I would like to get in and start cleaning up the school names and removing some of the test profiles that have been created, so long as everything I change in the database will be synced to the live site once we are ready to go live with this version.

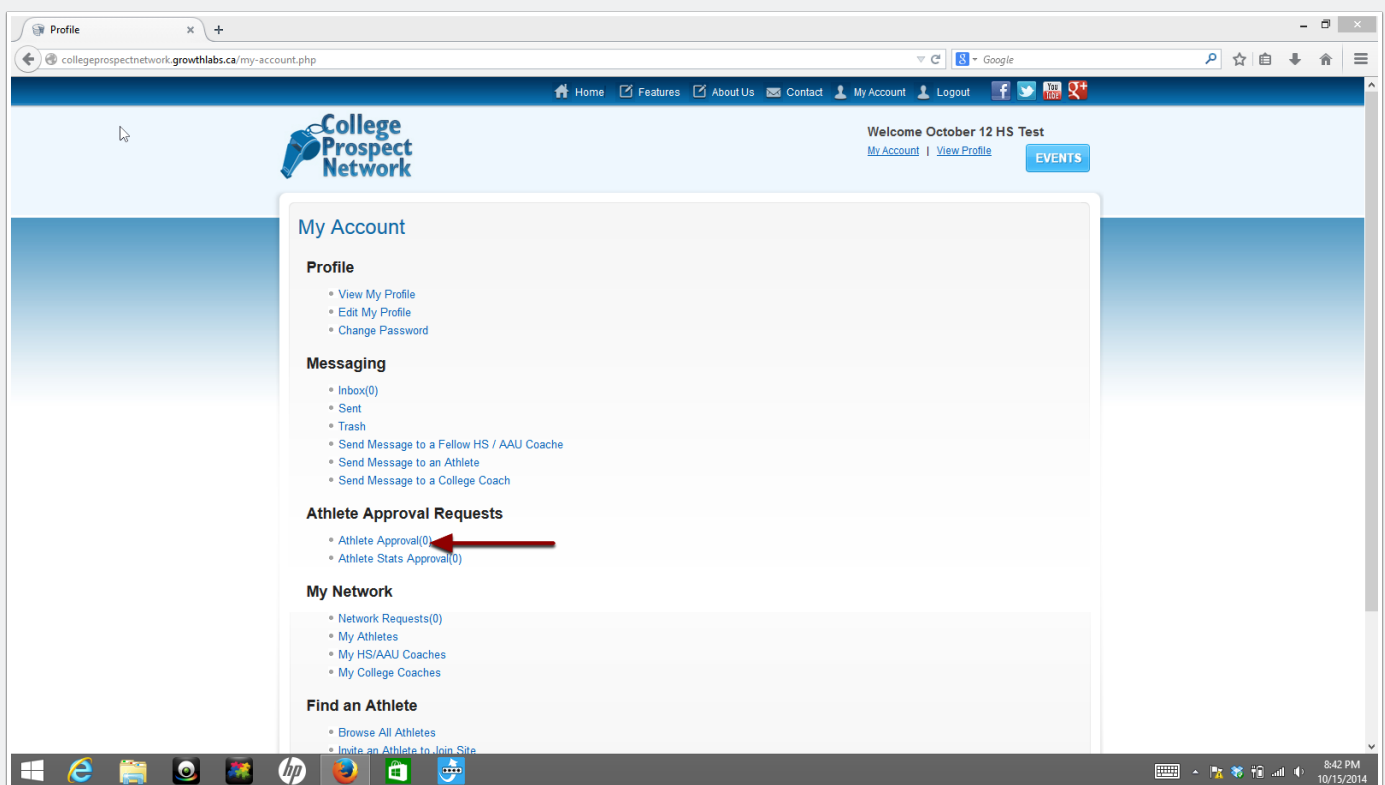

Athlete Approval is Not Working Correctly

The test Athlete account I just created should be matched to this HS Coach test account. They are both registered with the Sport as "Basketball - Mens" and the the

school/team as "Chelsea Hig School". The system should have matched them with October 12 HS Test being October 15 Athlete Test's coach. The Athlete Approval link below is where this should show that the Athlete is waiting to be approved, so that the coach can proceed with approving the Athlete so that he may join the site and complete his profile. If there are any questions about what certain features are and how they are supposed to work, please email me for clarification.

Athlete Allowed Access Without Approval

As mentioned in the previous screen shot, the Athlete should ot be allowed to access the site until he/she has been approved by the associated coach or the website Admin.

We do not allow just any Athlete to join the site; they must be legitimate college prospects, and this is one of the filters that we use to try to ensure we don't get unqualified players on the site.
